Burnaby, B.C. V5H 3X5

Attention: Mr. Warren Casperson

Dear Mr. Casperson:

I have a 20 year old Honda 7 1/2 HP outboard motor that had not run for about 15 years. Thinking that it might be worthwhile to resurrect it, I took it to a couple of outboard motor repair facilities for overhaul cost estimates. One facility was not interested in quoting, saying that it was not repairable. The other, after inspecting the motor and finding one cylinder with compression down to 70 psi, (50% of normal), quoted \$1100.00 minimum for an overhaul, but suggested that I scrap it and buy a new one.

My neighbor, (your S.E. Asia distributor), suggested that I install new spark plugs, points, condenser, fuel pump, and treat the engine and leg with Enviro-Save, then try to get the engine running in some fashion, or at least firing. At first we could get it to fire periodically, and later succeeded in keeping it running for short periods. As the Enviro-Save cleaners and resin started to take effect, the engine started to run smoother and kept running for longer periods of time. After about 2 hours of run time, the motor ran as smooth as it ever has. The compression is now normal in both cylinders and I've been using the Honda outboard to power my small boat on the south arm of the Fraser river.

In addition, I would like to inform you that early this year I installed an Enviro-Save Powertrain Protection kit in my 1990 model XJS Jaguar. I have noticed lower engine vibration levels and smoother gear changes in the automatic transmission.

I highly recommend the use of Enviro-Save products to not only revitalize, but to maintain motors and gearboxes in top running order.

Sincerely,

David Robinson
