

EVERBRITE CARPET CARE

DAVID REZANSON:
ENVIROSAVE:

June/10/00

Having been asked how I would evaluate my use of Envirosave Metal Treatment over the past 3 years I felt inclined to write this letter to share my results with other people.

After cleaning the Envirosave office 3 years ago, I mentioned to Kjell and David some of the problems I was having with my commercial carpet cleaner and van. My commercial blower that powers the vacuum did not seem to have enough power and the carpets would not be dry enough when cleaned. Also the 23-hp. Koehler engine that runs the cleaner ran very poorly and carbon developed in the heads often. They suggested treatments for the problems and I agreed to try them. Eight hours running time later, the next night to be exact, I noticed and recorded rather amazing results. My vacuum system had gone from 12.5 inches to 15.5 inches lift on the water column. More than an incredible improvement. Also my Koehler engine registered 200 extra rpm and when I changed the head gasket I found pistons and valves had none of the previous carbon buildup present. The extra pull from the vacuum left the carpets drier than ever and saved me having to use portable driers. My fuel consumption per cleaning hour improved quite noticeably.

At this time I decided to see if my van's 318 engine, that was extremely tired and ready to replace would benefit as much as my equipment. I first did some of their recommended testing so I could verify their claims. I drew a running oil sample, did a compression test and for the first time ran it through air care. Having these numbers I went ahead with the treatment. Within 10 days I rechecked 2 of the tests. The compression had come up from the lowest cylinder about 27 lbs., and the highest cylinder about 17 lbs. what a huge difference in power and smoothness. For the first time ever I had numbers that would pass air care and I could insure in the lower main land. From less than half to more than 70% reduction in the various emissions. At the same miles as the original oil sample, I repeated the process and got return numbers of less than half the wear rate in my engine. Envirosave proved to me exactly what they said.

I sold that van for more than double what I thought I would originally ask, as the engine and tranny performed beautifully when inspected.

My next use of Envirosave was on a 95 Bonneville I purchased at about 2.5 years old. I drove about 4 months before I treated all of its components. I monitored my fuel extremely closely during this time. After treating my car and running a couple of weeks I did repeated same distance trips and was amazed to find an average 23% increase in fuel economy. Having be a commercial trucker for many years, I was quite able to make accurate fuel readings.

I have used this product on many other pieces of equipment and vehicles since this time and get the same results each time as they promised I would. I recommend this product line to anyone. Its one-time use and permanent results appear to be undeniable and unbeatable.

Thanks To David & Kjell
