Dear Mr. Casperson:

I am writing further to receiving the Enviro-Save Engine Treatment for my 1989 Ford Probe-LX. After driving 6,000 miles since treating my car, I have found a number of significant enhancements to its operation.

The compression readings in 3 out of my 4 cylinders improved on average by 13%. I now get approximately 4-5 kilometers per gallon (2.5-3mpg) more, and I have re-found the zip in the car engine's that I used to enjoy when I bought it brand new.

I drive an average of 14,000 miles each year. It would take less than 6 months to recoup the one-time cost for the treatment. I have every intention of getting another 114,000 miles out of my car and believe I have improved the chances of that happening tremendously by using Enviro-Save. I would endorse this product to any car owner.

Sincerely,

Randall St. Godard
