Enviro-Save Dave:

I have owned Mainland Equipment Services Ltd. for 15 years and we specialize in heavy-duty mechanical and hydraulic repair and service. We have serviced and repaired well over 200 million dollars of heavy equipment and I believe we have a fairly well respected name in the industry and the fact that I am writing this letter fully recommending your Enviro-Save product line should say enough about how good Enviro-Save actually is.

I had heard about this metal treatment from various people in the industry, but just like every snake oil out there I assumed it was just another oil additive.

I wouldn't normally investigate any of this stuff, let alone try it or recommend it to my customers. One bottle of "add this" to the next bottle of "add that", they all seem the same.

What I learned a couple of years ago is that Enviro-Save is not an oil additive, it makes no changes to your oils, no coatings, no slipperier oil, no changes at all. Enviro is one of a kind, one time use only, metal treatment. Metal is very porous, (chrome included), the pores fill with soot's, carbons and varnish's and build onto surfaces and cause wear. Enviro cleans the metal and then fills the pores with a high-pressure permanent lubricant. It fills in the pores to the height of surrounding metal creating a smooth surface, half metal, half built-in lubrication. Cuts wear by about 50%, on all components. Amazing long term changes to temp's, noise, heat, power, fuel, oil consumption/blow-by and wear. Big cost savings are for real.
