I own a 1982 Plymouth Reliant Station Wagon. It has a 4-cylinder Mitsubishi engine with an automatic transmission. The heads were rebuilt around 80,000 km. and we did a ring job around 110,000 km. The vehicle currently has a little over 150,000 km. on the odometer. We are presently experiencing a little difficulty with either the carburetor or distributor that is resulting in less-than-desirable mileage. However, we treated our engine (minus automatic transmission) with the Enviro-Save Metal Treatment at 151,676 km. Below, you will see our results to date.

<u>GAS TANK FILLED</u>	<u>DISTANCE DRIVEN</u>	<u>FUEL REQUIRED</u>	<u>FUEL CONSUMED</u>	<u>% INCREASE COMPARED TO 8.5 km/l</u>
151,316 km.	360 km.*	42.34 l.	8.5 km/l	
VEHICLE TREATED WITH ENVIRO-SAVE METAL TREATMENT				
151,676 km.	443 km.	43.47 l.	10.19 km/l	19.88 %
152,119 km.	448 km.**	41.77 l.	10.73 km/l	26.24 %
152,567 km.	370 km.	36.855 l.	10.04 km/l	18.12 %
152,937 km.	390 km.***	39.5 l.	9.87 km/l	16.12 %

* 60% highway/40% city

** 80% highway/20% city

*** 25% highway/75% city

Drove 1651 km. Used 161.595 litres of fuel. Averaged 10.22 km/l. 20.24 % increase in fuel efficiency!

To say the least, we are very pleased with the results to date. In the near future, further results will be provided together with an oil sample analysis.

Sincerely yours,

Craig Gammon
