Attn: Warren Casperson

Hi Warren,

We treated our Cessna Hawk XP 195hp Continental engine to the Enviro-Save engine metal treatment at 750 hours since overhaul.

At the 1500 hr scheduled overhaul time it was removed for overhaul.

We found it more than just a little significant that the overhaul engineer observed wear to be equivalent to about a half time engine. It would appear that wear essentially stopped after adding Enviro-Save.

He remarked that we would save big dollars on the overhaul. We sure did.

We have treated our cars, motorcycles, and even the lawn mower with noticeable results. Fuel savings have come in at between ten and fifteen percent.

We're sold.

Cheers,
