Attention Mr. Kjell Kessell.

Dear Kjell;

Thanks very much for your superior envirosave products. I have a 1994 GMC 3/4 ton Suburban with a 6.5 turbo diesel.

I purchased the complete metal treatment kit for this vehicle and installed it just after break in as advised by Kjell. I am a commercial traveler and vehicles are very expensive to replace so I felt this would help it last longer.

This vehicle now has 200,000 kilometers on it and runs better than when it was new. My milage has increased to 24 mpg at highway speed. I used to get 19.5 - which is 23.5 % better.

If you calculate the average diesel price of 53 c's per liter over this period and driving 180,000 kilometers after treatment, the saving is 16.96 c's/10 km for a total of \$ 3.052. The treatment was paid for after driving only 17.785 kilometers. Very economical.

When I had the transmission serviced (oil and filter) I have never seen a pan so clean and no metal filings of any kind. The mechanic was also amazed? (The first service to that transmission was after 5 years.)

The only problem I ever had with this vehicle was the fuel injector pump and GM finally got this situation solved.

I would highly recommend this kit to anyone who wants their vehicle to last longer. As you know the diesel Suburbans cost over \$ 50,000.

Yours sincerely

Frank Timmis
